General Information

Short summary

The Polish company located in Lublin region is looking for partnerships with companies interested in ecological packaging systems.

Full description

The Polish company producing ecological cardboard packaging since 2009 proves the great potential of cardboard, which can be used to create practical and ecological packaging. Its products are very popular and appreciated both in Poland and abroad. Their greatest advantage is the possibility of using them in modern logistics and distribution systems, as well as their lightness and eco-friendliness. Thanks to this, they are not only easy to use, but also allow to reduce costs in the company. The company offers products for following sectors:

- automotive - glued pieces (fittings, blocks, boxes, immobilization inserts (transport of shaft rods, springs, springs, etc.) multi-layer spacers with the possibility of positioning, immobilizing e.g. steel and aluminum rims transport)
- biotechnology industry - liquid containers, cardboard pallets (probiotics, liquid eco fertilizers, etc.)
- machine industry (e.g. elevator manufacturer) - large-format packaging, reinforced boxes, specialized trusses
- machine industry (e.g. manufacturers of machine components, e.g. fans, etc.) - multilayer boxes with the possibility of fixing

- manufacturers of gates, windows, furniture, hotel equipment, spa offices - protective corners, glue pads, pallet legs (complete elimination of pallets or wooden pallets), furniture inserts, doors in place of non-ecological polystyrene
- other manufacturers for individual investments (courier shipments - heavy elements) - e.g. manufacturers of strongboxes, trench heaters, lighting - cardboard pallets, or just blocks to stick to the packaging
- casting producers (e.g. parts for office chairs, metal housings e.g. for industrial filters) - reinforced crates, immobilization
- food industry, especially producers of semi-finished products: egg masses, concentrates, malts, liquid dairy products for the ice cream industry, walruses (juices for the production of cheap flavored vodkas), liquid sugars
- companies dealing with recycling and waste disposal - light packaging for packaging and disposal (e.g. chocolate or other waste - where the disposal fee is per kilogram)
- pharmaceutical, cosmetic, chemical industry - IBC containers - size roses - transporting products, liquid semi-finished products, dietary supplements, we have cardboard packaging that can be sealed

Advantages and innovations

Ecological trusted supplier that guarantees repeatability of quality, standardized processes and operation in accordance with standards such as ISO.

Technical specification or expertise sought

Stage of development

Already on the market

IPR Status

No IPR applied

Sustainable Development goals

• Goal 12: Responsible Consumption and Production

Partner Sought

Expected role of the partner

Suitable clients are usually medium and large production companies, exporting their products, including some to overseas countries (long routes in containers). The situation is similar for companies shipping their products by air. The best situation is, if clients' products are complex and worth a lot (e.g. components for car production) or logistics companies serving production companies.

Companies that need non-standard packaging for large dimensions, with the need to immobilize the packed item on a pallet or within the packaging.

Companies looking for very strong packaging made of multi-layer cardboard. Companies that need to keep stocks and deliveries almost in the "just-in-time" standard.

There is also an aspect of ecology - if the recipient of our client forces it (e.g. elimination of polystyrene, wood, metal, plastic). Easy segregation.
